

Healthy Homes in NC Application Proposal

The Problem

One out of 4 North Carolina households live in extreme poverty and are at risk of homelessness.¹ Residents of homes in areas of concentrated poverty are at risk for asthma, lead poisoning, violent crime, behavioral and learning challenges.² Substantial evidence documents the health impacts of unsafe housing, while traditional responses to community and economic development either ignore or displace neighborhoods to improve real estate markets and reduce crime with limited emphasis on the public health consequences of such decisions. A growing body of evidence demonstrates promising results of health focused housing policies can also be compatible with the economic health of a community.^{3, 4}

Planned Approach

Our approach is to organize local leaders in business, public health, housing, and school systems to develop and implement a Big County Neighborhood Progress campaign against blight. This approach is informed by commitments from local policy makers and leaders to improve the physical, emotional, environmental, and economic health of our community. This approach is informed by the Memphis Neighborhood Blight Elimination effort that united sectors across the community towards housing health.⁵⁻⁹ Our plans are to:

- Update our community profile dashboard to include healthy housing and blight housing indicators
- Coordinate between housing code and county health department sectors to identify and address mold, bedbugs, other infestations in low wealth rental and home owned dwellings.
- Adapt code enforcement services to be proactive rather than reactive and punitive. One example is offering voluntary healthy home housing inspections in which renters and homeowners can invite a certified inspector to conduct an inspection without fear of punishment from the city.

Engage residents, businesses, and community organizers in plans to resolve blighted homes and support a community of healthy homes. One example includes reclaim and reuse plans for vacant land and buildings that values the cultural and historical context of the community.

Anticipated Outcomes

Goal 1: Engage a diverse array of stakeholders as partners in defining and planning the success of healthy homes. We will assemble an inclusive steering committee that

includes long time and recent residents, housing sector, health department, commerce representatives, and UNC faculty with relevant expertise who will guide our process.

Program strategies will be planned and implemented in close collaboration with neighborhood residents, businesses, and city/county agencies with sensitivity to historic preservation, neighborhood planning, and racial and economic disparities across the community. Process outcomes include established and new networks and communication plan to raise awareness of the causes, impacts, and interventions to address blighted communities. Additional outcomes are prioritized areas to Improve efficiency, effectiveness, and coordination of code enforcement and neighborhood maintenance policies

Goal 2: Adopt standard indicators of blighted properties and healthy homes. We will use data and information systems to catalogue, monitor, and disseminate assets and needs of Big County properties. Key milestones include the adoption of standard indicators of blighted property and healthy homes, collection of those indicators, a publicly accessible healthy homes dashboard, and steering committee led priorities connecting community investments to community values and historic preservation.

Goal 3: Improve efficiency, effectiveness, and coordination of code enforcement and neighborhood maintenance policies and efforts. Key milestones demonstrating this goal will be reflected in interagency collaboration to identify misalignments across agencies and progress towards priorities identified by the steering committee, improvements to existing policies to incorporate public health concerns, and as needed new policies that align with public health and housing safety. Additional milestones include an online and print directory of program and resources for addressing different types of blighted properties and supporting healthy homes, including individual and organizational level recommendations.

Goal 4: Encourage and incentivize productive reuse of vacant and abandoned properties. Launch public and private-sector youth and adult leaders training program to nurture the next generation of healthy home champions. Conduct small developer boot camp to stimulate diverse investment. Develop and maintain directory of large and small contractors, including minority contractors, skilled in renovation and rebuilding. Establish healthy homes management team involving mayor, city council, and local agencies that works with private sector and community leaders to identify and secure funding to operate and administer a comprehensive blight fighting system.

Evaluation

In order to evaluate the degree to which outcomes of the project are met, as indicators are established, baseline data will be collected engagement of stakeholders in housing policies, healthy home indicators, policies related to healthy/blighted homes. Indicators will be tracked in our blighted property dashboard, used to identify the top 10 property code violators, and shared quarterly with stakeholders (Goal 2). We will track participation in monthly community engagement sessions, identify established health home priorities and progress towards action planning, including alignment of housing

and health policies, process and participation in land reuse, and funding secured (Goals 1, 3, and 4).

Sustainability Plans

We will advocate for incorporation of the steering committee and identified priorities, data dashboard, and healthy home into the county's 10-year plan. We anticipate priorities identified by the steering committee, healthy home indicators, and cross agency collaboration will garner continued engagement of the mayor and other leaders in the economic development and implementation of this plan. We will leverage these milestones to see additional financial support to maintain the steering committee and a comprehensive community-informed blight fight system that includes land reuse and diverse investment in dwellings and other facilities that public health centric.

Whole Community Connection Team Members' Expertise and Partnerships

WCC Team Members	Organization	Role
Joe Smith, PhD	UNC City and Regional Planning	Brings place-based strategic planning for economic mobility and neighborhood change. Will work with team on development of data dashboard and priority setting.
Mary Shultz, PhD	UNC Gillings School of Global Public Health, Environmental Sciences	Brings research experience in economic and racial inequality and will develop health communication in collaboration with the steering committee
Pat Neumann, MSW	Big County Health Department	Responsible for community health outreach and will conduct group facilitation and trainings in collaboration with other Environmental Health Services, Cooperative Extension, and other partners.
Paul Blooth	Big County Housing Authority	Responsible for public housing and housing advisory board and is familiar with current housing policies. Will engage residents and collaborate across agencies

Other Team Members	Organization	Role
Joyce Martin, MBA	Big County Mayor	Accountable for a culture of health and economic viability of Big County
Jan Reid, MS	Big County Health System— Information Technology Department	Will coordinate changes to the IT system To create and maintain healthy homes dashboard
Healthy Homes Steering Committee	Stakeholders committed to a healthier Big County (~20)	Will participate in trainings and guide priority settings and plans
Martha Martin,	County Code Inspections	Responsible for code enforcement
Joel Ryan	Local police department	Responsible for public safety
Steven Lipscomb	Big County Cooperative Extension	Supports broadband access and education
